

Congratulations on your new resin floor!!!

Resin floors are very hard wearing and you should expect many years of maintenance free enjoyment. There are however a few simple steps we recommend to help you keep your floor as good as new.

Cleaning your floor is a breeze if you follow the simple instructions provided. Routine cleaning will help pro-long the service of your floor, and will keep it looking like new.

In your starter pack we have included everything you require to clean your floor, however for larger areas you may wish to upgrade to a bigger mop.

- 1. Fill up your water spray bottle with 10 parts water to 1 part KC-014 Bolidt Cleaner (exact measurements are not critical).**
- 2. Dry sweep the floor to remove all dust and loose debris with a dry microfiber flat mop.**
- 3. Spray the area to be mopped liberally with the diluted solution and then mop using a clean microfiber flat mop. Gauging the right amount of cleaner to spray on takes a little practice.**
- 4. If you have any stubborn stains that are not removed through routine cleaning, then we recommend pouring the solution onto the stain and to leave for 10 minutes prior to cleaning off. It may be necessary to use a stronger concentration of the cleaner in these circumstances.**
- 5. Allow your floor to fully dry before walking on it.**

As simple as that!
